Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Electrohydrodynamic (EHD) Jet Printing System competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Electrohydrodynamic jet printing (EHDJET), also known as Electrostatic jet printing (ESJET), or super inkjet (SIJ), is an emerging new technology for printing very high resolution, high aspect ratio structures. Here, droplets or continuous jets are ejected by applied electric fields instead of mechanical actuation. Exposure to an electric field causes mobile ions in a polarizable liquid to accumulate at the liquid surface. The coulombic repulsion of the ions causes the meniscus at the nozzle end to deform into a conical shape, called a Taylor cone. When the electric field exceeds a critical limit, the stress from the surface charge repulsion at the cone apex exceeds the surface tension and a droplet of fluid is emitted towards the grounded substrate, achieving pattern printing. The high-precision electrohydrodynamic inkjet printing system studied in this report refers to an electrohydrodynamic inkjet printing system with a positioning accuracy of less than or equal to 3 microns and a repeat positioning accuracy of less than or equal to 1 micron, mainly desktop (vertical) type. In 2024, global Electrohydrodynamic Jet Printing System production reached approximately 396 units, with an average global market price of around K US\$ 274.61 per unit. Electrohydrodynamic jet technology is an emerging technology that has higher resolution and accuracy than traditional piezo inkjet printing technology. As more and more manufacturers make breakthroughs in this technology, many new players will enter the market in the future, bringing more intense competition. With the advancement of technology, the accuracy and printing efficiency of EHD jet printing system will be further improved. EHD jet printing system is mainly used in semiconductor packaging,

display, printed electronics and other industries. Its downstream market is large and growing rapidly. Besides, the downstream market's demand for high-resolution printing also drives the growth of the EHD jet printing system market.

The global Electrohydrodynamic (EHD) Jet Printing System market size was estimated at USD 126.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 10.40% during the forecast period.
