## Abstracts

Electroless Plating is a surface treatment technology that does not require an external current. It uses a strong reducing agent to induce a redox reaction in a solution containing metal ions, so that the metal ions are reduced to metals under the action of metal catalysts, and then deposited on the surface of various materials to form a dense coating. Electroless Plating equipment is the core equipment for realizing this process. It introduces a suitable reducing agent to induce a controllable reduction reaction of metal ions in the plating solution on the surface of the part, thereby forming the desired metal coating.

The global Electroless Plating Equipment market size was estimated at USD 161.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.80% during the forecast period.
