Abstracts

Electrolyte iron powder is a highly pure form of iron produced through an electrolytic deposition process, where iron is dissolved from an anode and deposited as a fine, high-purity powder on a cathode in an electrolytic cell, resulting in particles characterized by high surface area, excellent compressibility, and superior magnetic properties. This material is distinguished from other forms of iron powder, such as reduced or atomized iron powders, by its exceptional purity levels, often exceeding 99.5%, and its unique dendritic or fibrous particle morphology, which makes it particularly suitable for specialized applications requiring high chemical reactivity, efficient magnetic performance, or enhanced sintering behavior.
