Abstracts

Aluminum electrolytic capacitors are one of the most critical components used in the electronics products and are used in all devices that are powered by electricity. A separator is the paper placed inside aluminum electrolytic capacitors to retain the electrolyte and prevent short circuits. In order to retain a sufficient amount of electrolyte, the separator must have enough porosity for electrolyte retention. However, the separator must also have high denseness to prevent a short circuit between the anode and cathode.

The global Electrolytic Capacitor Separators market size was estimated at USD 346.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.60% during the forecast period.
