## Abstracts

An Electrolytic Cleaner is a chemical cleaning product designed to remove surface contaminants through the process of electrolysis; it consists of conductive ions that, when a voltage is applied, enable an electric current to pass through the solution, initiating oxidation-reduction reactions at the anode and cathode to effectively dissolve and eliminate stubborn residues such as oils, rust, and oxides. Its distinctive feature is the capability to deeply penetrate tiny pores and crevices, offering a robust dissolution and stripping action on various persistent contaminants while maintaining a gentle approach to the substrate material, minimizing the risk of corrosion. Typically environmentally friendly, efficient, and reusable, an Electrolytic Cleaner completes the cleaning process without generating harmful waste liquids, yet it necessitates precise control of current and temperature to ensure optimal cleaning results and operational safety.

The global Electrolytic Cleaner market size was estimated at USD 189.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.20% during the forecast period.
