Abstracts

Electromagnetic Contactor or magnetic contactor is an electromagnetic type contactor and it can operate automatically. When electricity flows through the magnetic contactor, it causes the electromagnet to generate a strong magnetic field. This field pulls the iron core into the coil, and creates an electrical arc. Electricity passes in through one contact and into the contactor's parent device in this manner. To deactivate, the contactor can be physically pulled from the parent device. Also, in the absence of electrical current, the spring pushes the core away from the coil, breaking the connection. Global Electromagnetic Contactor key players include Schneider Electric, ABB, Siemens, Eaton, CHINT Group etc, the top five manufacturers held 51.76% of the market, in terms of Electromagnetic Contactor revenue. China is the largest market, with a share about 70%, followed by Europe, which have a share over 10 percent. In terms of product, AC Contactors is the largest segment, with a share over 80%. And in terms of application, the largest application is Industrial Electric Motors, followed by Lighting Automation.

The global Electromagnetic Contactors market size was estimated at USD 3000.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.90% during the forecast period.
