Report Overview

Electromagnetic Contactor or magnetic contactor is an electromagnetic type contactor and it can operate automatically. When electricity flows through the magnetic contactor, it causes the electromagnet to generate a strong magnetic field. This field pulls the iron core into the coil, and creates an electrical arc. Electricity passes in through one contact and into the contactor's parent device in this manner. To deactivate, the contactor can be physically pulled from the parent device. Also, in the absence of electrical current, the spring pushes the core away from the coil, breaking the connection.

The global Electromagnetic Contactors market size was estimated at USD 2617 million in 2023 and is projected to reach USD 4770.93 million by 2032, exhibiting a CAGR of 6.90% during the forecast period.
