The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Electromagnetic Residual Current Circuit Breaker competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Electromagnetic residual current operated circuit breaker is a safety device that uses electromagnetic mechanism to achieve leakage protection. It can quickly disconnect the power supply when detecting residual current exceeding the set value in the circuit (usually due to insulation damage or electric shock to the human body) to prevent electric shock accidents and electrical fires. It is widely used in residential, commercial and industrial power distribution systems. Compared with electronic circuit breakers, it has a simpler structure, strong interference resistance, and is insensitive to temperature changes. It is suitable for places with poor power grid environment or long-term stable operation.

The global Electromagnetic Residual Current Circuit Breaker market size was estimated at USD 1436.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.80% during the forecast period.
