## Abstracts

The electromagnetic therapy device for pain management is an innovative medical device that generates controllable pulsed electromagnetic fields (PEMF) or radio frequency waves to act on target areas of the human body, achieving therapeutic effects such as pain relief, tissue repair, and improved blood circulation through biophysical mechanisms. Electromagnetic therapy devices have been proven to have significant effects on various pain symptoms. It mainly includes chronic musculoskeletal pain (such as back pain, neck and shoulder pain), arthritis related pain (such as osteoarthritis, rheumatoid arthritis), neuropathic pain (such as diabetes peripheral neuropathy, post herpetic neuralgia) and postoperative pain. The global market of electromagnetic therapy device for pain management has shown a steady growth trend in recent years, with the market size continuously expanding. This growth trend is mainly driven by multiple factors such as population aging, increasing prevalence of chronic pain, and rising consumer health awareness. The North American region is currently the world's largest market, followed closely by the European market. In contrast, emerging markets such as Asia, Latin America, and the Middle East currently have a smaller market share but enormous growth potential, and are expected to expand at a rate higher than the global average in the coming years. The main participants in the global market include international brands such as Galileo Life Sciences, Core Therapy, and Magnetico. These enterprises dominate the global market, especially in developed regions, with advanced technology, rich clinical data, and mature brand influence. The competitive landscape in the Chinese market presents the characteristic of domestic and foreign brands competing on the same stage. Local enterprises such as Vishee Medical Technology and Lifotronic Technology are gradually narrowing the technological gap with international brands and forming unique advantages in cost-effectiveness and localized services. The sales model of

electromagnetic therapy devices is becoming increasingly diversified. Professional medical equipment mainly enters hospitals and clinics through medical device distributors, while household equipment reaches end consumers through channels such as pharmacies and e-commerce platforms. The development of pain management electromagnetic therapy devices is rapidly evolving towards intelligence, personalization, and miniaturization. In the future, the electromagnetic therapeutic apparatus will have the connection function, which can be connected with smart phones, tablets or the Internet to realize real-time monitoring of the treatment process, collect data and provide remote medical monitoring. This intelligent interconnection feature will greatly enhance patients' treatment compliance and doctors' remote management capabilities, especially suitable for long-term management of chronic pain patients. Meanwhile, with the advancement of medical science, electromagnetic therapy devices will provide a higher degree of customized treatment, offering personalized treatment plans based on the specific needs and conditions of patients, including precise adjustments in treatment intensity, frequency, duration, and other aspects.

The global Electromagnetic Therapy Device For Pain Management market size was estimated at USD 450.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.40% during the forecast period.
