The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Electromechanical Brake-by-Wire System competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The electromechanical brake-by-wire system refers to a braking system that uses electronic signals instead of traditional mechanical or hydraulic transmission to transmit, control and execute the driver's braking intention. The system collects braking instructions through sensors, and after real-time processing by the control unit (ECU), it directly drives the vehicle's braking mechanism with motors, actuators and other components, thereby achieving faster and more accurate braking force distribution, energy recovery and intelligent driving assistance functions. It is widely used in the fields of new energy vehicles, smart cars and high-performance vehicles, and is one of the important development directions of future automotive braking technology.

The global Electromechanical Brake-by-Wire System market size was estimated at USD 1239.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.10% during the forecast period.
