Report Overview

A Electromechanical Solenoid Valve is an electromechanically operated valve. Solenoid Valve is used to control the fluid automatic based components, belonging to the actuator; the valve is controlled by an electric current through a solenoid: in the case of a two-port valve the flow is switched on or off; in the case of a three-port valve, the outflow is switched between the two outlet ports. Multiple Solenoid Valves can be placed together on a manifold. Solenoid Valves are the most frequently used control elements in fluidics. Their tasks are to shut off, release, dose, distribute or mix fluids. They are found in many application areas. Solenoids offer fast and safe switching, high reliability, long service life, good medium compatibility of the materials used, low control power and compact design.

The global Electromechanical Solenoid Valves market size was estimated at USD 4190.20 million in 2023 and is projected to reach USD 5661.34 million by 2032, exhibiting a CAGR of 3.40% during the forecast period.

North America Electromechanical Solenoid Valves market size was estimated at USD 1156.41 million in 2023, at a CAGR of 2.91% during the forecast period of 2024 through 2032.
