### Report Overview

Electron beam defect re-inspection equipment is a type of equipment used to detect and repair electron beam defects. Electron beam defects generally refer to defects generated during the manufacturing process of semiconductor chips, such as defects during electron beam exposure or defects caused by impurities. These defects can cause the chip to degrade or malfunction. Electron beam defect re-inspection equipment can detect and repair chips with high precision by using electron beam technology. It scans the surface of a chip and detects defects within it. Once a defect is detected, the device can be repaired using electron beam techniques, such as by etching or depositing material to repair the defective area. Electron beam defect re-inspection equipment has the characteristics of high resolution, high precision and high efficiency, which can help chip manufacturers improve the quality and reliability of chips. It is widely used in the semiconductor industry for defect detection and repair in the chip manufacturing process.
