Report Overview:

The Electron Beam Processing Systems (EPS) uses High Energy electrons as its radiation source. The High Energy electrons, generated by normal currents, are accelerated through the accelerator to near the speed of light and the electrons are focused to a fixed scanning angle to form a scanning curtain of electrons in a sweeping pattern. Finally, the speed of transmission of the product through the scanning curtain is precisely controlled.

Electron Beam Processing Systems (EPS) are a staple of industrial equipment used in many commercial radiation processing applications. EB accelerators are commonly used in various industrial, scientific, and medical applications due to their ability to produce High Energy electron beams.
