Abstracts

Electron Resist is a subdivision of photoresist. Photoresists are primarily used in the electronics industry and in high demand from the semiconductor and liquid crystal display (LCD) sectors where photolithography is a main manufacturing process. Photolithography is a very important process during chip fabrication and makes up a large portion of production costs. Although it varies depending on semiconductor types, the photolithography process generally accounts for 30% of memory chip manufacturing costs and 60% of total production time. Due to its rigid demand from downstream industry, the market of photoresist will keep increasing and in the coming few years. China managed to recover from the repercussion of the COVID-19 pandemic. However, there are frequent instances of new cases in certain pockets. China is likely to recover in the second half of the year. However, the Eurozone, one of the hardest-hit regions, will undergo a recession throughout 2020. Also, Taiwan, which is the largest consumer of photoresist and photoresist ancillaries, was not much affected by COVID 19, and most of its industry was back on track quite early. Within the Eurozone, Germany, a manufacturing hub, will recover at a much slower pace than the other countries. The US economy is also likely to see an unprecedented slump, with unemployment set to rise. Recovery will be slow and will only be seen in the second half of the year. Global Electron Resist Market is classified into North America, Europe, Asia Pacific, and the Rest of the world. The largest share in the market will be dominated by the Asia Pacific owing to an upsurge in the production of high-end semiconductor chips & ICs and high demand for sensors in countries like Taiwan, China, Japan, & South Korea.

The global Electron Resist market size was estimated at USD 205.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.30% during the forecast period.
