Abstracts

The Electronic Air Spring Damper Module is an advanced suspension technology that integrates both air springs and dampers into a single, electronically controlled unit. This module is designed to provide superior ride comfort, stability, and handling performance in vehicles by actively adjusting the suspension characteristics in real-time. It plays a crucial role in enhancing the overall driving experience, particularly in premium and high-performance vehicles, where comfort and dynamic handling are paramount. Today the majority of new cars in the luxury and upper middle class range, including some Sport Utility Vehicles (SUVs), have air suspension. The volume of the air in the air cushions in all corners of the car can be controlled. This is done by controlling the flow of the air in and out of the additional air reservoirs. The system includes a special air compressor, one or two air reservoirs, four shock absorber units with air springs and traditional shock absorbers, 2 to 5 stand-alone accelerometers and the electronic control unit (ECU).

The global Electronic Air Spring Damper Module market size was estimated at USD 4587.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.30% during the forecast period.
