Report Overview

Bone Growth Stimulator (BGS) is an electrical device used in the medical industry for the healing process of a fracture. BGS enhances this process by stimulating the production of new cells by applying the proper amount of electrical energy to the bone, allowing the fracture to heal considerably faster. Stimulators are commonly used for hard-to-treat fractures, non-unions, and poorly healing stress fractures of the scaphoid, distal tibia, femur, humerus, and fifth metatarsal shaft. The bone growth stimulating results in an enhanced osteogenic environment with calcification and mineralization of the fibrocartilage, repairs the fracture site and increases vascularity.

The global Electronic Bone Growth Stimulators (Bgs) market size was estimated at USD 1026.45 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
