Abstracts

Electronic Cigarette ICs are integrated circuits that serve as the core electronic control units within electronic nicotine delivery systems (ENDS), commonly known as e-cigarettes or vapes. These specialized microcontrollers manage and regulate critical functions such as battery power output, heating element activation, temperature control, user interface feedback (e.g., LED indicators or display screens), and safety protections like over-current, short-circuit, and over-discharge prevention. Designed for compact form factors and low power consumption, they often interface with sensors, buttons, and atomizer coils to deliver a consistent and customizable vaping experience, with advanced variants supporting variable wattage, temperature control modes, and connectivity features. Their performance directly influences device efficiency, user safety, and overall product reliability in the rapidly evolving ENDS market.

The global Electronic Cigarette Ic market size was estimated at USD 14800.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.50% during the forecast period.
