Abstracts

Electronic cigarette rods, often referred to as vape pens or e-cigarette devices, are handheld electronic devices that heat a liquid solution (e-liquid or vape juice) to produce an inhalable aerosol, commonly known as vapor. These devices typically consist of a battery, a heating element (atomizer or coil), and a reservoir or cartridge to hold the e-liquid, which may contain nicotine, flavorings, and other chemicals. Designed as alternatives to traditional combustible cigarettes, electronic cigarette rods vary in complexity from disposable, pre-filled models to advanced, refillable systems that allow users to customize components such as wattage, temperature, and airflow. The primary function of these devices is to deliver nicotine or flavored vapor without the combustion of tobacco, positioning them within the broader category of nicotine or tobacco harm reduction products, though their use extends to non-nicotine consumption for recreational purposes.

The global Electronic Cigarette Rod market size was estimated at USD 18684.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 10.50% during the forecast period.
