Abstracts

An electronic clutch actuator (ECA) is an electromechanical device that replaces traditional mechanical or hydraulic clutch systems in vehicles, using electronic signals from sensors and control units to precisely engage and disengage the clutch without direct driver input. It enhances drivability by enabling smoother gear shifts, reducing wear on clutch components, and supporting advanced functionalities such as automated manual transmissions (AMTs), start-stop systems, and integration with hybrid or electric powertrains. By translating electronic commands into physical movement?typically via motors, solenoids, or piezoelectric elements?ECAs improve fuel efficiency, reduce emissions, and contribute to vehicle automation and driver assistance features.

The global Electronic Clutch Actuator market size was estimated at USD 1200.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the forecast period.
