## Abstracts

Electronic cooling pads are a cooling solution for electronic devices designed to effectively conduct, disperse and dissipate the heat generated in the device to maintain the normal operating temperature of the device. These thermal pads are often used as one of the key cooling components of electronic devices, helping to prevent overheating and improve the performance and life of the device. As the power density of electronic devices continues to increase, future electronic cooling pads will need to have higher thermal conductivity properties to effectively conduct and disperse the high heat generated by the devices. Electronic cooling pads may become thinner and more flexible to accommodate increasingly compact and thinner device designs while providing better thermal conductivity.

The global Electronic Cooling Pad market size was estimated at USD 924.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 14.40% during the forecast period.
