Report Overview

The electronic expansion valve is composed of a controller, an actuator and a sensor. Since the temperature sensing part of the electronic expansion valve is a thermocouple or thermal resistance, it can accurately reflect the change of superheat at low temperature and provide more accurate flow adjustment. At the same time, the electronic expansion valve has a large flow control range, sensitive response, and rapid action. The fine adjustment makes up for the shortcomings that the capillary tube and the thermal expansion valve cannot be adjusted, and is more suitable for the electronic and thermal management control of electric vehicles. This report studies the Electronic expansion valve for new energy passenger Vehicles.

The global Electronic Expansion Valve for New Energy Passenger Vehicles market size was estimated at USD 397 million in 2023 and is projected to reach USD 1643.40 million by 2030, exhibiting a CAGR of 22.50% during the forecast period.
