Report Overview

Electronic Expansion Valves (EEVs) are mainly used in refrigeration, air conditioning and heat pump systems to realize automatic adjustment of refrigerant flow, so that the system can operate under the best conditions, and achieve rapid cooling or heating, precise temperature control and energy saving. The electronic expansion valve is composed of a controller, an actuator and a sensor. Since the temperature sensing part of the electronic expansion valve is a thermocouple or a thermal resistance, it can accurately reflect the change of heat at low temperatures and provide more accurate flow adjustment.
