## Abstracts

An electronic fish egg sorter is a machine designed to automatically sort fish eggs based on various criteria such as size, shape, color, and viability. This technology helps fish hatcheries and aquaculture facilities streamline their egg sorting process, saving time and labor costs. The sorter typically consists of a conveyor belt or chute system that carries the fish eggs through a series of sensors and cameras. These sensors and cameras analyze the eggs and sort them into different categories based on the pre-set criteria. Some electronic fish egg sorters also have the capability to remove unfertilized or dead eggs from the batch, ensuring that only healthy and viable eggs are used for hatching. This helps improve the overall success rate of the hatching process and ultimately leads to higher yields of healthy fish. Overall, an electronic fish egg sorter is a valuable tool for fish hatcheries and aquaculture facilities looking to improve efficiency and productivity in their egg sorting process.

The global Electronic Fish Egg Sorter market size was estimated at USD 331.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.30% during the forecast period.
