### Report Overview

An Electronic Flight Bag (EFB) is a device that allows flight crews to perform a variety of functions that were traditionally accomplished by using paper references. In its simplest form, an EFB can perform basic flight planning calculations and display a variety of digital documentation, including navigational charts, operations manuals, and aircraft checklists.

An EFB uses software on a Windows Surface, iPad or other portable device, or on a device installed in the aircraft cockpit, to deliver a range of functions to the pilot that would previously have been in paper format.

The software is the most important part of an EFB device, and the hardware is relatively produced. Currently most of the hardware is Apple iPad or Microsoft's Surface. So in this report, we analyze and research the software of electronic flight bag system. The sales are for software installed capacity and sales revenue is only the software of flight bag system.
