Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Electronic Glass Fiber for Construction competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Electronic glass fiber for construction is a functional reinforcement material made from glass fiber as a base material through coating or compounding processes. It combines insulation, fire resistance, corrosion resistance, and high strength. It is widely used in building structural reinforcement, curtain wall systems, fire isolation, and smart building sensor networks. Its gross profit margin is significantly higher than that of ordinary building materials. High-end electronic-grade glass fiber cloth, for example, boasts a significant premium, primarily due to its superior material performance and the strong demand for functional composite materials in intelligent buildings. Global sales of electronic glass fiber for construction are expected to reach 260,000 tons in 2024, with an average selling price of approximately US\$650 per ton. Upstream raw materials such as quartz sand and boric acid account for a significant portion of production costs, and their price fluctuations directly impact profitability. Midstream encompasses fiberglass yarn drawing, weaving, and coating processes. Intelligent manufacturing technology permeates the entire process, and AI-powered kiln temperature control systems elevate product yields to a high level. Downstream applications include building structural reinforcement (such as carbon fiber-glass hybrid reinforcement materials), curtain wall systems (low-dielectric fiberglass cloth for signal penetration), fire isolation (heat-resistant fiberglass cloth certified by ASTM E84), and intelligent sensing (fiberglass mesh embedded with optical fibers monitors structural health), forming a closed loop of "materials-manufacturing-application."

The global Electronic Glass Fiber for Construction market size was estimated at USD

169.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.20% during the forecast period.
