Ammonia is a compound of nitrogen and hydrogen with the formula NH₃. Ammonia is a colourless, pungent, flammable gas at atmospheric pressure and temperature. This report mainly studies electronic grade Ammonia (?99.999% Purity) market. Electronic grade ammonia (NH₃) is a high-purity form of ammonia that is used extensively in the electronics industry. Electronic grade ammonia is used in various applications, such as in the production of silicon wafers, where it is employed in processes like chemical vapor deposition (CVD) to create thin films and other critical layers. Its high purity ensures that the materials produced have the desired electrical properties and performance characteristics. It is crucial in the manufacturing of semiconductors and other electronic components where even trace impurities can impact the performance and reliability of the final products. The semiconductor gases industry will be remaining an oligopoly, that is, a market with a very limited number of producers. Due to the production process technology of special gases and the customer's requirements for purity and accuracy, high technical barriers have been formed for prospective entrants in the industry. With more customized needs of customers, the competition of enterprises gradually tends to the competition of comprehensive service capability. With the development of third-generation semiconductors, the demand for gallium nitride as its important material has risen sharply, which in turn strengthens the market expectation of electronic-grade high-purity ammonia, one of the raw materials of gallium nitride. Benefiting from the mass production and use of large-scale integrated circuits and computers, the rise of optical fiber communication, digital communication, and satellite communication technologies, the electronic semiconductor industry has become a high-tech industry that promotes the development of science and technology. The rapid development of the electronic semiconductor industry has also brought unprecedented development to the electronic grade ammonia gas industry. The strong support of the policy and the Chinese government's high investment will promote the

rapid development of the electronic gas industry. The China market will remain one of the main driving markets for the industry.

The global Electronic Grade Ammonia (NH₃) market size was estimated at USD 136.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.30% during the forecast period.
