## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Electronic Grade Cyanide-Free Gold Plating Solution competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Electronic-grade cyanide-free gold plating solution is an environmentally friendly electroplating solution specially designed for the surface treatment of electronic components. It uses soluble gold salt as the gold source and non-cyanide reducing agent as the main ingredient, and is combined with auxiliary agents such as high-efficiency chelating agents, buffers and antifoaming agents. Through electrochemical reduction, gold ions are evenly deposited on the surfaces of circuit boards, conductive contacts and pins, forming a dense gold layer with excellent conductivity, wear resistance and oxidation resistance. This process avoids the high toxicity risk of cyanide, has higher operating safety, and the coating thickness and uniformity are easy to accurately control. It is widely used in metallization treatment of semiconductor packaging, precision connectors and microelectronic devices.

The global Electronic Grade Cyanide-Free Gold Plating Solution market size was estimated at USD 242.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.80% during the forecast period.
