## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Electronic-grade Epoxy Resin for Flexible Copper Clad Laminates competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Electronic resin for Flexible Copper Clad Laminates (FCCL) refers to electronic-grade resins specifically designed for the manufacturing of FCCL. It must meet core requirements such as flexibility, moisture and heat resistance, insulation, and bonding stability of flexible substrates. Serving as an insulating adhesive layer in the structure, it enables firm bonding between copper foil and flexible substrates (e.g., PI film) while ensuring the electrical performance and mechanical reliability of FCCL under repeated bending and harsh environments. In 2024, the global production of electronic resin for flexible copper clad laminates will reach 12,900 tons, with a production capacity of 13,500 tons, an average selling price of US\$28,900/ton, and a gross profit margin of 33.13%. The upstream supply of electronic resins for FCLs consists of basic chemical raw materials, such as bisphenol A and epichlorohydrin for epoxy resins, and dianhydride and diamine for polyimide resins. These raw material supplies rely on petrochemical and fine chemical companies, and prices are influenced by the supply and demand of crude oil and chemicals. The midstream sector comprises resin manufacturers, who use polymerization and modification processes to create specialized electronic resins suitable for FCLs, which must meet properties such as flexibility and moisture and heat resistance. The core downstream sector is flexible copper clad laminate (FCCL) manufacturers, who combine resins with copper foil, PI film, and other materials to create FCCLs. FCCLs are then used in the production of flexible printed circuit boards (FPCs), ultimately used in consumer electronics, automotive electronics, wearable

devices, and other fields.

The global Electronic-grade Epoxy Resin for Flexible Copper Clad Laminates market size was estimated at USD 373.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.30% during the forecast period.
