Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Electronic-grade Epoxy Resin for Rigid Copper Clad Laminates competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Electronic-grade resin for Rigid Copper Clad Laminates (RCCL) is an electronic-grade resin designed for RCCL manufacturing. Its core function is to serve as an insulating adhesive layer, which must meet requirements like high rigidity, temperature resistance, insulation, and compatibility with substrates such as copper foil and glass fiber cloth. During production, it is compounded and cured with substrates to form the insulating framework of RCCL, ensuring RCCL stably supports circuits, resists external deformation in electronic devices (e.g., computers, communication base stations), and maintains long-term electrical performance and mechanical reliability. In 2024, global production of electronic resins for rigid copper clad laminates (FCCLs) reached 57,800 tons, with a production capacity of 60,000 tons, an average selling price of \$25,800 per ton, and a gross profit margin of 330.01%. The upstream industry of electronic resin for rigid copper clad laminates mainly covers various basic chemical raw material production fields. Bisphenol A and epichlorohydrin are key raw materials for synthesizing basic liquid epoxy resin. Their production is affected by crude oil price fluctuations and market supply and demand. For example, an increase in crude oil prices will drive up the costs of bisphenol A and epichlorohydrin, thereby affecting the price of basic liquid epoxy resin. Functional additives such as MDI and DOPO are used to improve resin performance, and their supply and prices are also influenced by the production capacity of related chemical industries and market demand. The middle reaches are the electronic resin production links. Manufacturers use specific processes to process upstream raw materials into electronic resins suitable

for rigid copper clad laminates. The downstream mainly serves the copper clad laminate manufacturing industry. Electronic resin is an important part of the production cost of copper clad laminates (accounting for about 20 - 25%). Its performance determines the key characteristics of copper clad laminates such as rigidity, heat resistance, and insulation. Copper clad laminates are widely used in printed circuit board manufacturing and ultimately serve many electronic fields such as computers, consumer electronics, automotive electronics, and communication equipment.

The global Electronic-grade Epoxy Resin for Rigid Copper Clad Laminates market size was estimated at USD 1492.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.00% during the forecast period.
