Report Overview

Electronic Grade Hydrogen Peroxide (EGHP) is a highly purified form of hydrogen peroxide specifically produced for use in the semiconductor, electronics, and microelectronics industries. Unlike industrial-grade hydrogen peroxide, EGHP contains extremely low levels of metallic and ionic impurities, organic residues, and particulates, making it suitable for critical processes such as wafer cleaning, photolithography, and chemical mechanical planarization (CMP). Its high oxidation potential and chemical stability enable the precise removal of microscopic contaminants and thin-film residues, which are essential for achieving high yields and reliability in semiconductor manufacturing. In addition, EGHP is produced under strict quality control and often stabilized to prevent decomposition during storage and transport, ensuring consistent performance in ultra-clean applications. At the same time, the rising complexity of electronic devices and shrinking semiconductor node sizes has increased the demand for ultra-pure chemicals like EGHP, further highlighting its significance in modern electronics fabrication.

Based on the synthesis of multiple market reports and industry forecasts, the global electronic grade hydrogen peroxide market in 2024 is reasonably estimated to be approximately USD 528.51 million. From 2024 to 2033, the market is expected to grow at a compound annual growth rate (CAGR) of around 10.2%, driven by several factors. The primary driver is the continued expansion of the semiconductor and electronics industries, especially in Asia-Pacific, which accounts for a large portion of global semiconductor fabrication. In addition, the increasing adoption of advanced manufacturing technologies, including 3D NAND, EUV lithography, and next-generation MEMS devices, has elevated the requirement for high-purity chemicals. At the same

time, growing investments in solar photovoltaic cells and flat panel displays also contribute to increased EGHP consumption. Furthermore, manufacturers are emphasizing stringent quality and environmental standards, which necessitates the use of highly purified and stable hydrogen peroxide in critical electronic processes. Overall, these factors collectively fuel market growth and create opportunities for leading chemical suppliers.

The global Electronic Grade Hydrogen Peroxide market size was estimated at USD XX million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of XX% during the forecast period.
