Abstracts

An electronic passport reader is a data collection device capable of reading electronic passports. Electronic passport is a new type of passport that integrates personal information into a chip, usually sandwiched in the middle of the passport's inner pages. This chip stores the holder's personal information, photos, fingerprints, and other biometric data, making it one of the most difficult documents to forge. The electronic passport reader communicates with the passport chip through wireless radio frequency signals, reads and parses this data, thereby achieving fast reading and verification of passport information.
