Abstracts

Electronic Protection and Attack Systems are any configuration of EW technologies that are designed and built for use on one or more air, ground, sea, or space platforms to execute military or intelligence missions. These configurations usually consist of multiple EW devices and scalable subsystems working in concert, including several that house multiple devices in one self-contained unit. Electronic Protection and Attack Systems are critical technologies that have become integral components of both modern military and commercial sectors. As technology continually evolves, market trends are also shifting, with a growing demand for these systems. In the military domain, electronic protection systems are becoming increasingly vital as modern warfare relies heavily on electronic devices and communications. These systems effectively safeguard military communications, radar, and navigation systems from hostile interference and attacks. Additionally, attack systems are continually advancing, providing armed forces with enhanced capabilities to disrupt enemy communications, navigation, and radar systems. Market trends indicate that the demand for electronic protection and attack systems in the military sector will continue to grow, especially in high-tech conflicts. In the commercial sector, electronic protection systems have gained significant importance as well. With the proliferation of the Internet of Things (IoT) and increased industrial automation, various industries need to safeguard their critical equipment and communication networks against hacking and malware attacks. Moreover, industries such as aerospace and energy increasingly rely on highly secure electronic protection systems to ensure the smooth operation of their infrastructure. Hence, there is a rising demand for electronic protection systems in the commercial sector.

The global Electronic Protection and Attack Systems market size was estimated at USD 1103.0 million in 2025 and is projected to grow at a compound annual growth rate
