Abstracts

An electronic pulse igniter is a device used to generate a high-voltage spark for initiating combustion in gas-powered appliances, operating by converting low-voltage DC power from batteries or an electrical source into a high-voltage pulse through an electronic circuit, typically involving a step-up transformer and a spark gap; it is commonly found in residential and commercial applications such as gas stoves, ovens, grills, water heaters, and fireplaces, providing a reliable, flameless alternative to manual ignition methods like matches or lighters, with key features including energy efficiency, safety through reduced gas leakage risks, and durability due to the absence of continuously burning pilot lights.

The global Electronic Pulse Igniter market size was estimated at USD 220.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.75% during the forecast period.
