## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Electronic Resin for Copper Clad Laminates competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Electronic Resin for Copper Clad Laminates refers to synthetic resins specifically used in the manufacturing of Copper Clad Laminates (CCL). It meets the core performance requirements of the electronics industry, such as purity, insulation, bonding strength, and temperature resistance. It mainly serves as an insulating medium and bonding carrier in the CCL structure, ensuring the CCL can support copper foil, insulate current, and adapt to the processing and service environment of electronic circuits. In 2024, global production of electronic resins for copper-clad laminates (CCLs) reached 68,000 tons, with a production capacity of 70,000 tons. The average selling price was \$27,400 per ton, resulting in a gross profit margin of approximately 31.32%. The upstream supply of CCLs primarily consists of basic chemical raw materials, such as epichlorohydrin, bisphenol A (epoxy resin raw material), styrene, and petroleum resin (hydrocarbon resin raw material). Suppliers are primarily large petrochemical companies, and raw material prices are significantly affected by the supply and demand of crude oil and chemical markets. The midstream sector, comprising CCL manufacturers, polymerizes and modifies upstream raw materials to produce resin products with varying performance characteristics (such as high-frequency and heat resistance) for supply to CCL manufacturers. The core downstream sector is the copper-clad laminate (CCL) industry, where resins are compounded with copper foil, fiberglass cloth, and other materials to create CCLs. These laminates are then used in the production of printed circuit boards (PCBs), ultimately used in consumer electronics, communications, automotive electronics, and other fields.

The global Electronic Resin for Copper Clad Laminates market size was estimated at USD 1865.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.10% during the forecast period.
