### Report Overview

Electronic Shelf Label, also known by the acronym ESL. It is the latest solution for inventory and price management in the retail sector, based on the use of advanced IT technology. ESL replaces conventional paper price tags attached to the shelves of supermarkets and department stores with, for example, LCDs and electronic paper (E-paper) that show information on product price, sales promotions, etc.

ESL takes advantage of Zigbee, a low-power wireless communication technology, to keep product prices updated in real time. ESL consists of an e-paper equipped tag and gateway which delivers product information. The central server transmits information of each product to the gateway, which in turn sends such information to thousands of tags at the same time.

An electronic shelf label includes a transceiver configured to communicate with a plurality of wireless data tags associated with a plurality of retail products.

Global Electronic Shelf Label (ESL) key players include BOE (SES-imagotag), Pricer, SoluM, E Ink, etc. Global top four manufacturers hold a share over 65%.

Europe is the largest market, with a share about 55%, followed by Asia-Pacific and North America, both have a share about 40 percent.

In terms of product, E papers Displays is the largest segment, with a share over 80%.

And in terms of application, the largest application is Department Stores/Mass Merchandise, followed by Grocery/Supermarket, Drug Stores, etc.
