Report Overview:

Electronic Shelf Label, also known by the acronym ESL. It is the latest solution for inventory and price management in the retail sector, based on the use of advanced IT technology. ESL replaces conventional paper price tags attached to the shelves of supermarkets and department stores with, for example, LCDs and electronic paper (E-paper) that show information on product price, sales promotions, etc.

ESL takes advantage of Zigbee, a low-power wireless communication technology, to keep product prices updated in real time. ESL consists of an e-paper equipped tag and gateway which delivers product information. The central server transmits information of each product to the gateway, which in turn sends such information to thousands of tags at the same time.

An electronic shelf label includes a transceiver configured to communicate with a plurality of wireless data tags associated with a plurality of retail products.

The Global Electronic Shelf Label (ESL) Market Size was estimated at USD 1140.02 million in 2023 and is projected to reach USD 2568.88 million by 2029, exhibiting a CAGR of 14.50% during the forecast period.
