Report Overview:

Germane hydride, also known as germanane, is an inorganic compound with molecular formula GeH_4 and molecular weight 76.63. It is a colourless toxic gas with unpleasant irritating odour at normal temperature and pressure. It is stable at room temperature, starts to decompose at about 280 °C, and almost all decomposes into elements Ge and H_2 at about 350 °C. It can burn in the air and emit blue red flame when burning, but the burning degree is not as intense as silane. Mixtures with oxygen or air are explosive. It reacts with alkali metals in liquid ammonia at room temperature. Germane has strong autocatalytic property. Once it decomposes to form a metal coating, it will decompose rapidly. Therefore, the surface of piping and other materials must be smooth. Insoluble in water, but soluble in hypochlorite, slightly soluble in hot concentrated sulfuric acid. It can be decomposed by nitric acid. It can be used to produce high purity germanium.
