Abstracts

Electronic special paper (base paper) is mainly made of wood pulp, which is simply cut to form slitting paper tape, and then processed to form punched paper tape, punched paper tape, etc. Previously, the raw paper required for the production of thin paper carrier tapes in China was mainly imported from abroad due to technological limitations. On the one hand, the price of imported raw paper was relatively high, which brought significant cost pressure to the production of thin paper carrier tapes. On the other hand, due to the fact that the raw paper mainly relied on imports, there were many unstable factors in the supply of raw materials for thin paper carrier tapes, which made this technology long-term restricted by foreign countries and affected the development of the thin paper carrier tape industry in China. In addition, the production process of raw paper is relatively complex, requiring mastery of multiple key technologies including paper surface treatment, interlayer bonding force control, anti-static treatment, and lint control, which have a high technical threshold.

The global Electronic Specialized Paper market size was estimated at USD 367.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.00% during the forecast period.
