Abstracts

An electronic vacuum pump is a device that utilizes an electric motor to generate suction and create a vacuum by removing air or gas molecules from a sealed environment, commonly used in applications ranging from automotive braking systems and medical equipment to industrial automation and laboratory processes. Unlike traditional mechanical pumps, these units operate independently of engine power, offering precise control, higher efficiency, reduced noise, and compatibility with electric and hybrid vehicles, where engine vacuum may be insufficient or unavailable. They are valued for their reliability, compact design, and ability to maintain consistent vacuum levels, making them essential in sectors requiring clean, on-demand vacuum generation without parasitic energy loss.

The global Electronic Vacuum Pump market size was estimated at USD 1020.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.25% during the forecast period.
