Abstracts

An electronic valve controller is an intelligent device used to precisely regulate the flow of liquids, gases, or steam in industrial and commercial systems by receiving electronic signals (such as 4-20 mA, 0-10 V, or digital protocols like HART, Foundation Fieldbus, or PROFIBUS) and adjusting the position of a valve actuator accordingly. These controllers often integrate features such as feedback mechanisms, diagnostics, and communication capabilities, enabling automated control, remote monitoring, and integration with broader process automation or building management systems. They are critical components in industries including oil and gas, water and wastewater treatment, chemical processing, power generation, and HVAC, where accurate flow control is essential for operational efficiency, safety, and compliance.

The global Electronic Valve Controller market size was estimated at USD 1250.4 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.80% during the forecast period.
