Report Overview:

Catheter ablation is a minimally invasive procedure used to remove or destroy faulty electrical pathways from sections of the heart that promote irregular cardiac rhythms (also known as cardiac arrhythmias). Cardiac arrhythmias can be of several types, including atrial fibrillation, atrial flutter, and supraventricular tachycardia. Atrial fibrillation is the most common type of cardiac arrhythmia prevalent among the global population. EP ablation catheters are devices used to treat cardiac arrhythmias. These catheters destroy the faulty tissue with the use heat energy generated from RF, laser and microwave radiation or by freezing the abnormal tissue.
