Report Overview

The electroplating tank grinding wheel is a grinding tool used for metal surface treatment. It is usually used for grinding, polishing and removing oxide layers on metal surfaces. The 'electroplating bath' in the name of the electroplated tank grinding wheel refers to the fact that the surface of the grinding wheel is covered with a layer of electroplating coating, which can improve the wear resistance and grinding efficiency of the grinding wheel. Electroplating tank grinding wheels are usually composed of abrasives, binders and metal substrates. Abrasive is the grinding part of the grinding wheel. Common abrasives include alumina, silicon carbide, boron nitride, etc.; binders are used to fix the abrasives on the metal substrate. Common binders include resin, ceramics, rubber, etc.; The metal matrix is ??the support structure of the grinding wheel, usually made of metal such as steel or aluminum.
