Abstracts

Electroplating grade ABS (Acrylonitrile Butadiene Styrene) is a specialized engineering thermoplastic composite specifically engineered to serve as a substrate for electroplating processes, where it is chemically treated and metallized to achieve a durable, high-gloss metallic finish while retaining the material's inherent lightweight, impact-resistant, and moldable properties. This grade features optimized formulations?often including specific additives and surface-active agents?to promote superior adhesion of metal layers (such as chrome, nickel, or copper) through etching and activation stages, ensuring peel strength, thermal stability, and dimensional consistency during plating, making it ideal for automotive trim, consumer electronics, bathroom fixtures, and decorative hardware where aesthetic appeal, corrosion resistance, and structural integrity are critical.

The global Electroplating Grade Abs market size was estimated at USD 1025.75 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
