Abstracts

The electrospinning machine nozzle is a key component used in the electrospinning process. By applying high voltage, the polymer solution is ejected from the nozzle to form long and thin fibers. In this process, the nozzle is not only responsible for the delivery of the solution, but also generates a strong electric field, so that the polymer solidifies into ultra-fine fibers during flight, which is used to manufacture various non-woven fabrics or functional materials.

The global Electrospinning Nozzle market size was estimated at USD 79.3 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.60% during the forecast period.
