Report Overview

Electrospun chitosan nanofibers are a type of nanofiber material manufactured using chitosan, a natural polymer derived from chitin, a substance found in shellfish shells. The electrospinning process involves the application of high voltage to a polymer solution, which creates an electrically charged jet of solution that gets pulled and deposited onto a collector surface, forming a network of nanofibers. Chitosan has several unique properties that make it an ideal material for electrospinning, including its biocompatibility, biodegradability, and antibacterial activity. Electrospinning chitosan nanofibers can be fabricated into different forms, such as membranes, scaffolds, or coatings, depending on the desired application.
