Abstracts

An electrostatic charging bar, also known as an ionizing bar or static eliminator bar, is a specialized device used in industrial and manufacturing processes to neutralize static electricity on surfaces of materials such as plastics, films, paper, textiles, and electronics. It operates by generating a balanced output of positive and negative ions, which are directed toward the charged surface to counteract and dissipate electrostatic charges, thereby preventing issues like dust attraction, product jamming, misalignment, or damage to sensitive components. These devices are critical in industries where static interference can compromise product quality, operational efficiency, or safety, and they are commonly integrated into production lines, packaging systems, printing equipment, and cleanroom environments to maintain consistent and controlled manufacturing conditions.

The global Electrostatic Charging Bar market size was estimated at USD 120.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.75% during the forecast period.
