Report Overview

Electrostrictive materials are similar to piezoelectric materials because they are ferroelectric crystals, which exhibit a dimensional change upon an applied electric field or an electric polarization in an applied mechanical stress.

However, electrostrictive actuators use a lead-magnesium-niobate (PMN) crystal stack while piezoelectric actuators use lead-zirconate-titanate (PZT)-based ceramics.

Electrostrictive transducers are used in a number of applications that include adaptive optic systems, scanning tunneling microscopes, and precision micropositioners.
