## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Electrosurgical Grounding Pads competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global sales of electrosurgical grounding pads reached 235 million units, with an average selling price of US\$2.40 per unit. Electrosurgical grounding pads are medical consumables used to close the patient current circuit during high-frequency electrosurgery. Their primary function is to conduct excess current, prevent burns, and ensure patient safety. Composed of a conductive adhesive layer, a PET or PE base film, a wire connector, and a medical adhesive, these pads offer excellent conductivity, adhesion, and biocompatibility, making them widely used in operating rooms, outpatient electrosurgical procedures, plastic surgery, obstetrics and gynecology, and urology departments. Upstream raw materials primarily include conductive adhesive, electrode foil, medical polymer film, and packaging materials. Core suppliers include 3M, Tesa, Toray, and Nan Ya Plastics; major manufacturers include ConMed, Medtronic, Bovie, Weigao, and Kangdeli. Global production capacity is approximately 250 million units per year, with an industry gross profit margin of approximately 28%-35%. Downstream consumption is accounted for by hospitals and surgical centers, with approximately 75%, and medical aesthetics and outpatient surgeries accounting for approximately 20%. Conductive adhesive and electrode materials account for approximately 60% of the total manufacturing cost. In the future, this product will develop towards intelligent monitoring, biodegradable materials, and wireless safety monitoring to meet the needs of precision medicine and intraoperative safety management.

The global Electrosurgical Grounding Pads market size was estimated at USD 564.0

million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.70% during the forecast period.
