## Abstracts

Electrosurgical tip cleaners are specialized medical tools designed to clean and maintain the electrode tips used in electrosurgical procedures. During surgery, electrosurgical tools can accumulate debris, charred tissue, and other residues, which can impair their efficiency, reduce precision, and increase the risk of complications. Tip cleaners help remove this buildup by providing a quick and sterile way to clean the instrument's tip, typically between uses or during the procedure itself. They are often made of materials that effectively clear debris without damaging the delicate electrodes, helping to maintain optimal performance and safety throughout the procedure.

The global Electrosurgical Tip Cleaners market size was estimated at USD 111.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.10% during the forecast period.
