Abstracts

An electrotherapy system is a medical or wellness device that applies controlled electrical impulses to the body to stimulate nerves, muscles, or tissues for therapeutic purposes. These systems are used across various applications, including pain management, muscle rehabilitation, neuromuscular re-education, and tissue healing, often in physical therapy, sports medicine, chiropractic care, and home healthcare settings. They operate through modalities such as Transcutaneous Electrical Nerve Stimulation (TENS), Electrical Muscle Stimulation (EMS), interferential current (IFC), and microcurrent therapy, delivering targeted electrical signals to modulate pain perception, prevent muscle atrophy, improve circulation, or accelerate recovery from injury. Devices range from simple, over-the-counter units for personal use to sophisticated, clinical-grade systems with programmable parameters, multiple channels, and advanced features for professional treatment protocols.

The global Electrotherapy System market size was estimated at USD 890.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.85% during the forecast period.
